

Report for ForestQuery into Global Deforestation, 1990 to 2016

ForestQuery is on a mission to combat deforestation around the world and to raise awareness about this topic and its impact on the environment. The data analysis team at ForestQuery has obtained data FROM the World Bank that includes forest area and total land area by country and year FROM 1990 to 2016, as well as a table of countries and the regions to which they belong.

The data analysis team has used SQL to bring these tables together and to query them in an effort to find areas of concern as well as areas that present an opportunity to learn FROM successes.

1. GLOBAL SITUATION

According to the World Bank, the total forest area of the world was 41282694.9 km² in 1990. As of 2016, the most recent year for which data was available, that number had fallen to 39958245.9 km², a loss of 1324449 sqkm, or 3.31 %.

The forest area lost over this time period is slightly more than the entire land area of Peru listed for the year 2016 (which is 1279999.9891 km²).

2. REGIONAL OUTLOOK

In 2016, the percent of the total land area of the world designated as forest was 31.38%. The region with the highest relative forestation was Latin America & Caribbean, with 46.13%, and the region with the lowest relative forestation was Middle East & North Africa, with 2.06% forestation.

In 1990, the percent of the total land area of the world designated as forest was 32.42 %. The region with the highest relative forestation was Latin America & Caribbean, with 51.08 %, and the region with the lowest relative forestation was Middle East & North Africa, with 1.78%% forestation.

Table 2.1: Percent Forest Area by Region, 1990 & 2016:

| Region | 1990 Forest Percentage | 2016 Forest Percentage |
|----------------------------|------------------------|------------------------|
| East Asia & Pacific | 25.78% | 26.36% |
| Europe & Central Asia | 37.20% | 38.07% |
| Latin America & Caribbean | 51.08% | 46.14% |
| Middle East & North Africa | 1.78% | 2.07% |
| North America | 35.66% | 36.02% |
| South Asia | 16.53% | 17.50% |
| Sub-Saharan Africa | 30.67% | 28.79% |

The only regions of the world that decreased in percent forest area FROM 1990 to 2016 were **Latin America & Caribbean** (dropped FROM **51.08%** to 46.14%) and **Sub-Saharan Africa** (30.67% to **28.79%**). All other regions actually increased in forest area over this time period. However, the drop in forest area in the two aforementioned regions was so large, the percent forest area of the world decreased over this time period FROM 32.42% to 31.38 %.

3. COUNTRY-LEVEL DETAIL

A. SUCCESS STORIES

There is one particularly bright spot in the data at the country level, China. This country actually increased in forest area FROM 1990 to 2016 by 527229.06 km² It would be interesting to study what has changed in this country over this time to drive this figure in the data higher. The country with the next largest increase in forest area FROM 1990 to 2016 was the United States, but it only saw an increase of 79200 km², much lower than the figure for China.

China and United States are of course very large countries in total land area, so when we look at the largest *percent* change in forest area FROM 1990 to 2016, we aren't surprised to find a much smaller country listed at the top. Iceland increased in forest area by 213% FROM 1990 to 2016.

B. LARGEST CONCERNS

Which countries are seeing deforestation to the largest degree? We can answer this question in two ways. First, we can look at the absolute square kilometer decrease in forest area FROM 1990 to 2016. The following 3 countries had the largest decrease in forest area over the time period under consideration:

Table 3.1: Top 5 Amount Decrease in Forest Area by Country, 1990 & 2016:

| Country Name | region | Absolute Forest Area Change |
|--------------|---------------------------|-----------------------------|
| Brazil | Latin America & Caribbean | 541510 |
| Indonesia | East Asia & Pacific | 282193.98 |
| Myanmar | East Asia & Pacific | 107234 |
| Nigeria | Sub-Saharan Africa | 106506 |
| Tanzania | Sub-Saharan Africa | 102320 |

The second way to consider which countries are of concern is to analyze the data by percent decrease.

Table 3.2: Top 5 Percent Decrease in Forest Area by Country, 1990 & 2016:

| Country | Region | Pct Forest Area Change |
|------------|---------------------------|------------------------|
| Togo | Sub-Saharan Africa | 75.45 |
| Nigeria | Sub-Saharan Africa | 61.8 |
| Uganda | Sub-Saharan Africa | 59.13 |
| Mauritania | Sub-Saharan Africa | 46.75 |
| Honduras | Latin America & Caribbean | 45.03 |

When we consider countries that decreased in forest area the most between 1990 and 2016, we find that four of the top 5 countries on the list are in the region of Sub-Saharan

Africa. The countries are Togo, Nigeria, Uganda, Mauritania and Honduras. The 5th country on the list is Honduras, which is in the Latin America & Caribbean region.

FROM the above analysis, we see that Nigeria is the only country that ranks in the top 5 both in terms of absolute square kilometer decrease in forest as well as percent decrease in forest area FROM 1990 to 2016. Therefore, this country has a significant opportunity ahead to stop the decline and hopefully spearhead remedial efforts.

C. QUARTILES

Table 3.3: Count of Countries Grouped by Forestation Percent Quartiles, 2016:

| Quartile | Number of Countries |
|----------|---------------------|
| 1 | 85 |
| 2 | 72 |
| 3 | 38 |
| 4 | 9 |

The largest number of countries in 2016 were found in the 94 quartile.

There were 9 countries in the top quartile in 2016. These are countries with a very high percentage of their land area designated as forest. The following is a list of countries and their respective forest land, denoted as a percentage.

Table 3.4: Top Quartile Countries, 2016:

| Country | Region | Pct Designated as Forest |
|-----------------------|---------------------------|--------------------------|
| Suriname | Latin America & Caribbean | 98.26 |
| Micronesia, Fed. Sts. | East Asia & Pacific | 91.86 |
| Gabon | Sub-Saharan Africa | 90.04 |
| Seychelles | Sub-Saharan Africa | 88.41 |
| Palau | East Asia & Pacific | 87.61 |

| | | |
|-----------------|---------------------------|-------|
| American Samoa | East Asia & Pacific | 87.50 |
| Guyana | Latin America & Caribbean | 83.90 |
| Lao PDR | East Asia & Pacific | 82.11 |
| Solomon Islands | East Asia & Pacific | 77.86 |

5. RECOMMENDATIONS

Write out a set of recommendations as an analyst on the ForestQuery team.

- What have you learned FROM the World Bank data?

- 1) We can see the topic of the forest area is being on much more awareness. Example, the region Latin America & Caribbean has been in the highest place for lands designated as forest, in 1990 and also in 2016. Although the percent has dropped from 51.08% to 46.13%. the countries in this region should examine their data so they can keep their percent forest or designated more lands as forests.
- 2) The Middle East & North Africa should be very careful, her percentage is very low compared to the rest of the world. the countries in these regions should be more aware, invest more resources to designate lands to forest to get up in the percentages compared to the world.

- Which countries should we focus on over others?

- 1) We can split the countries by 2 categories:
 - 1.1) The countries which have decreased in the forest area: Brazil, Indonesia, Myanmar, Nigeria and Tanzania.
 - 1.2) The countries which have decreased in percentage forest area according to their lands: Togo, Nigeria, Uganda, Mauritania and Honduras.
